

TELEMETRY

Valley controls offer optional two-way communication features that let you manage your irrigation equipment 24/7, without the time and energy costs of trips to the field.

Valley BaseStation2-SM

Centralized irrigation management for your office computer, custom designed to suit your needs. Control and monitor pivots, pumps, valves and other devices without going to the field. Now with Soil Moisture monitoring capabilities.

Tracker

With the introduction of Valley Tracker Mobile, irrigators now have access via Smartphone for remote management of their pivots and linears.

Irrysis

Irrysis specialises in process control, one way and two way remote control systems, pump protection, custom PLC control and water transfer management. No matter what your irrigation needs Irrysis allows you to automate and control all aspects of irrigation pumping and monitoring offering

you unequalled irrigation support. By doing this you will be able to manage your water more efficiently and safely.
