

Re-piping – A low cost solution

You're considering replacing your machine because your pipeline is corroding. But why replace the entire machine when only the pipeline is bad?

Re-piping is the lowest cost way to significantly extend the life of your machine. Ask your Valley dealer about getting a water sample and to find out about other re-piping specials.

- PolySpan® – for any corrosive condition, including corrosive water as well as certain types of crop protection and soil treatment chemicals.
- Galvanized Pipe – for machines with a limited remaining life.
- Weathering Steel – for soft water conditions.
