

GPS Guidance

Precision Application with GPS Technology

Valley GPS Guidance for Corners and Linears allow producers to install corner and linear irrigation equipment where it previously might have been difficult or cost prohibitive to do so – in turn giving them an opportunity to increase the number of acres available for production. It uses the latest in satellite based RTK to accurately steer the machine around the field for the most precise application of water and other crop inputs.

Valley GPS Guidance for Corners and Linears

- Eliminates buried wire guidance systems
- Can use the same GPS correction signal used for tractor guidance
- Easily reprogram the path with the custom Valley mapping tool to match changes in farm practices or field boundaries.
- Compatible with existing John Deere™ Starfire™ RTK corrections, allowing growers to achieve higher profitability with lower overall investment.
