

Valley Select2 Control Panel – Monitor and control 24/7

The Valley Select2 Panel offers a combination of easy-to-read digital displays and push button controls. This panel gives you the ability to increase your level of control as your operation grows or technology advances.

Features include end gun, stop-in-slot and auto reverse set right in the panel, pivot position reporting and field sector controls that allow you to change application for varying crops and special field diagnostics that reduce your downtime and service calls by keeping you informed of pivot status at all times, even remotely. The 3-year warranty gives you peace of mind and low long-term operating costs.

This panel is designed to work with Tracker or TrackerSP, allowing you to monitor status and perform basic controls from your cell phone or Internet connection. It does connect to the BaseStation2, but with limited functionality.

Select2 now incorporates Valley Pro2 field proven processor technology providing you with the reliability and durability you expect. This technology allows for future panel software upgrades with the expanded memory capacity proving you access to new technology advancements.
